

AlphaMindz Platform Refactoring

Unified Software Requirements Specification & Technical Architecture (SRS Master)

DOCUMENT VERSION	TARGET PLATFORM	CLIENT REPRESENTATIVE	RELEASE DATE
Master v1.0 (Unified)	alphamindz.com	AlphaMindz Management	September 2026

1. Executive Summary & Project Objectives

This document provides the single, unified Software Requirements Specification (SRS) for refactoring the **alphamindz.com** digital platform. The objective is to replace the static landing infrastructure with an interactive, secure, and modern portal ecosystem featuring additive tier-based course management, downloadable digital assets, manual UPI QR payment verification, quiz/assessment score archiving, and dynamic certificate generation with embedded QR validation.

2. User Roles & Access Control Hierarchy

Role	Permissions & Access Scope	Key Functional Capabilities
Guest / Visitor	Public marketing pages, course introductions, certificate verification portal.	Browse course tiers, register free account, verify credentials by Certificate ID/QR scan.
Registered Learner	Free sample modules, enrolled course tiers, purchased e-books, payment uploads, assessment history.	View protected course PDFs, download e-books, submit quizzes, view archived scorecards, download authentic PDF certificates.
Admin / Owner	Full administrative dashboard, user management, and financial transaction review.	Upload/tier PDF content, review/approve payment proofs, issue manual overrides/discounts, manage assessments, issue certificates.

3. User Lifecycle, Multi-Course Enrollment & Dashboard States

3.1 Frictionless Onboarding & Free Tier Access

- **Registration Parameters:** Account creation requires strictly **Full Name** and **Email Address**.
- **Instant Free Access:** Upon signing up, the user is automatically granted view-only access to introductory module PDFs and open sample assessments.

3.2 Multi-Course Enrollment & Archiving

- **Simultaneous Multi-Enrollment:** A learner can enroll in multiple independent courses concurrently (e.g., IELTS Preparation + Six Sigma). Each course maintains its own independent state machine, payment record, and progress timeline.
- **Learner Dashboard Architecture:**
 - **Active Courses:** Direct access to unlocked view-only PDF modules and pending assessment checkpoints.
 - **Completed & Archived Courses:** Past courses remain organized in an archived section for reference reading and immediate certificate re-downloads.
 - **Explore / Catalog:** Additional courses, assessments, and e-books available for purchase.

3.3 Post-Completion User State

Student Status	Dashboard State & Interface	Permitted User Actions
Free / Inactive	Displays free sample PDF modules, course catalog, and e-book store.	Initiate new course purchase, download free resources, take sample quizzes.
Active Enrolled	Active course modules unlocked in secure viewer; assessment links enabled.	Stream view-only modules, take modular quizzes, track completion.
Course Completed	Course moves to "Completed & Archived" section with completion badge.	Review archived materials, download official PDF certificate, enroll in advanced courses.

4. Additive Course Structure & Content Protection Rules

Tier Level	Module Composition	Delivery Security Policy	E-Book Policy (Digital Asset)
BASIC	Tier 1 (Basic) PDF Modules	Strictly View-Only: Rendered inside embedded canvas. Direct download, printing, right-click, and text scraping disabled.	Downloadable PDFs: All purchased standalone E-Books are directly downloadable to user devices.
STANDARD	Tier 1 (Basic) + Tier 2 (Standard) Modules	Strictly View-Only: Session-authenticated streaming via signed URLs.	
ADVANCED	Tier 1 (Basic) + Tier 2 (Standard) + Tier 3 (Advanced)	Strictly View-Only: Cryptographically signed temporary streaming tokens.	

5. Assessments & Quiz Engine (Workflow & Score Archiving)

- **Module & Milestone Tests:** Courses can include embedded or standalone assessments (MCQs, subjective tests, or structured evaluations).
- **Attempt Limits & Evaluation:** Admin configures attempt limits per test. MCQs are evaluated automatically upon submission; subjective tests flag for admin review.
- **Permanent Scorecard Archive:** Every completed test attempt is permanently archived in the student's dashboard (Date taken, Score, Percentage, Pass/Fail status, and breakdown).
- **Certification Prerequisite:** Passing the required assessments serves as an automated trigger/milestone for course certificate eligibility.

6. Payment Architecture: Static/Dynamic UPI QR & Approval Engine

UPI QR Payment & Approval Lifecycle

Payment State Machine Rules:

- **QR Code Presentation:** The checkout modal renders the official AlphaMindz UPI QR code dynamically encoded with payment parameters (VPA, payee name, and payable amount).
- **Single-Click Action Constraint:** The checkout button locks immediately upon generation to status Generated to prevent duplicate or ambiguous order generations.
- **Admin Override & Custom Discounting:** Admin retains authority to activate any tier directly, waive fees, or apply offline custom discounts per user.

7. Dynamic Certification & Embedded QR Verification Engine

- **Downloadable PDF Certificate:** Generated dynamically in high-resolution, print-ready PDF format upon course completion.
- **Dynamic Data Bindings:** Learner's Registered Full Name, Course Title and Completed Tier, Course Duration (e.g., "6 Weeks / 40 Hours" or Start-to-End Dates), Unique AlphaMindz Credential ID (e.g., AMZ-2026-CERT-8842), and Official Digital Signatures.
- **Embedded Dynamic QR Code:** Every issued certificate includes a scannable QR code printed directly on the certificate layout.
- **One-Scan Public Verification Portal (/verify):** Scanning the QR code or searching the Credential ID on alphamindz.com/verify provides real-time tamper-proof validation confirming learner identity, course completed, and issue date.

8. Technical Architecture & Security Baseline

9. Legal & Intellectual Property Rights: Content Ownership

9.1 Content Ownership & Copyright Clause:

AlphaMindz (The Client) retains 100% exclusive ownership, copyright, title, and intellectual property rights over all materials uploaded to the platform, including course PDFs, e-books, assessment questions, branding assets, and certificate templates.

9.2 Operational & Upload Responsibilities:

The Client/Admin is solely responsible for uploading, organizing, editing, and maintaining the accuracy and legality of all published educational content, pricing structures, and promotional materials. The development team acts strictly as technology providers and holds no ownership, liability, or rights over uploaded course assets.

10. Client Acceptance & Authorization

By executing below, the client confirms that these unified functional requirements, workflows, legal ownership clauses, and technical safeguards accurately reflect the agreed project scope.
