

Achievers

Foundation course for your success

Workbook - 4

Class 4

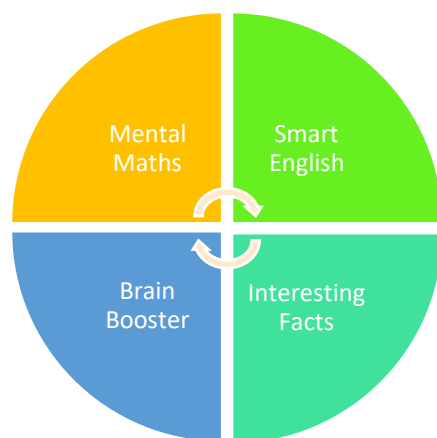

www.mentorsbasket.com

Preface

Most students and teachers think that the word "**Worksheet**" is a synonym for the word "*Boring.*" We envision hours of sitting still at a desk-silent busy working for them and hours of grading for us. But worksheets still have a place in your classroom? In an age of open inquiry and problem-based learning, your child can still find power in a simple paper and pencil activity by practicing MENTORSBASKET WEEKLY worksheets.

Achievers Model bring to your child an opportunity to develop academically as well as for the competitive World. The Learning Process of every child is dependent on One's Ability to think logically and reason Quickly and effectively. These two factors are hence very crucial to a child's progress in education.

Mentors Basket Achievers weekly workbook covers Mental Math, Smart English, Interesting Facts and Brain Boosters. These Powerful worksheets can help in building number sense, computational thinking, and problem-solving skills in your child at beginning of the foundational years. **Every Month we would be providing 3 Workbook and 1 Challenge Workbook, each of these are designed at different levels and standard wise. We would be providing upgraded workbooks, that makes the child to look forward to challenges. Weekly Workbook would be consisting of the following content:**

It is a unique way to provide differentiated brain-building work for different learners.

Strong Foundation Helps to Build Brighter Future

Design Framework

The Sample Workbook Consist of the topics as under:

- **Mental Maths** - We want our students to be able to understand content and concepts. We also want to stretch them to think and approach problems in new ways. This editable graphic organizer can help them do that! Challenge the students to solve a math problem more than one way. Have them explain how and why they solved it with their given strategy. Over time, we can see how mathematics can be transformed into a subject that is not only fun but also challenges students' creativity and independent thinking.
- **Smart English** - The study of English Language Arts, or speaking, listening, reading, and writing, is critical both to academic success and to life beyond school. Without the skills learned in language arts, students cannot achieve any kind of mastery in any of their coursework. Good communication skills are necessary for every career field, so these on-demand workbooks give your students the mixed review of grammar, spelling, and writing skills that will enable them to practice their language arts skills in a fun and diverting manner, ensuring that the skills they have learned will Supplement their language.
- **Brain Boosters** – The students need to be aware of what is happening Locally, Nationwide as well as Globally and what can be more challenging to the brains then answering some General Knowledge. We have designed worksheets that will give them an edge in competitive exams as they are more aware of the information.
- **Interesting Facts** - Academically we tend to focus more on the book knowledge, so now we want the child to be introduced to some interesting facts that can help them lead a discussion or lead in debates , competition and be a PRO kid. These interesting facts will increase their limited area of knowledge and make them more competitive and smarter.

GUIDELINES

1. Look at Problems with Different Perspectives Through Observation, Exploration and Critical Thinking.
2. Integrate the Application of Math to Problem Solving.
3. Integrate the Reading Skill in English To Solve Vocabulary or Spelling Questions.
4. Think Critically and Reason Logically
5. Practise, Investigate, Evaluate and Learn with Understanding
6. Develop Positive Attitude Towards Finding Solution
7. If Your No Able to Solve or Find Solution Seek for Help.
8. Take A Break and Revisit the Question with Fresh Thought
9. Ask Yourself How Many Questions You Could Answer in First Attempt.
10. Focus and Concentration Is the Only Key to Success

Smart English Worksheet 1

1. Learn about irregular plurals and solve the given exercises.

Definition

You typically form the plural spelling of a noun by adding "-s" or "-es" to the end of the noun. So dog becomes dogs, cat becomes cats, box becomes boxes, etc. These would all be examples of regular plurals.

Many nouns do not form regular plurals, though. These nouns form irregular noun plurals. The general rules are...

(A) Singular nouns ending in "-f" and "-fe" form the plural by dropping that ending and adding "-ves."

(B) Singular nouns ending in "-o" add "-es."

(C) Many singular nouns change their vowels when made plural.

Example

We change knife to knives. This shows rule (A) in action.

We change tomato to tomatoes. This shows rule (B) in action.

We change foot to feet. This shows rule (C) in action.

Practice

Write the plural noun form of the singular noun given.

1. woman _____

2. tooth _____

3. wolf _____

4. man _____

5. moose _____

Smart English Worksheet 3

1. Who are physicists? What work do they do? Read the following comprehension and answer the following questions.

Physicists

By Cindy Grigg

Physicists are scientists who study the physical world. They study matter, the "stuff" that makes up all things. They study forces and how things move. They study atoms. They study stars and space. They also study energy and how it changes forms. Physicists do experiments. They observe what happens. They use math to find the answers to questions. They use computer models to study things. Some physicists study the universe to find out how it began. Some try to solve practical problems right here on Earth. They might invent new machines or new materials. Physicists often work in labs. Some may teach at colleges. Some work for the government. Some work in hospitals or medical services. If you'd like to be a physicist, you'll need to take many math and science courses in high school and college. You should be good at solving problems. You'll need curiosity, too!

Physicists

Questions

- _____ 1. What does a physicist do?
 - A. invent
 - B. experiment
 - C. observe
 - D. all of the above
2. Physicists study the _____ world.

3. Physicists must study _____ in college.

- _____ 4. Which of these things would a physicist probably NOT study?
 - A. energy
 - B. lions
 - C. atoms
 - D. stars

Did you know these Interesting Facts! – EARTH AND UNIVERSE

UNIVERSE

The **universe** is all of space and time and their contents, including planets, stars, galaxies, and all other forms of matter and energy. While the spatial size of the entire universe is unknown, it is possible to measure the size of

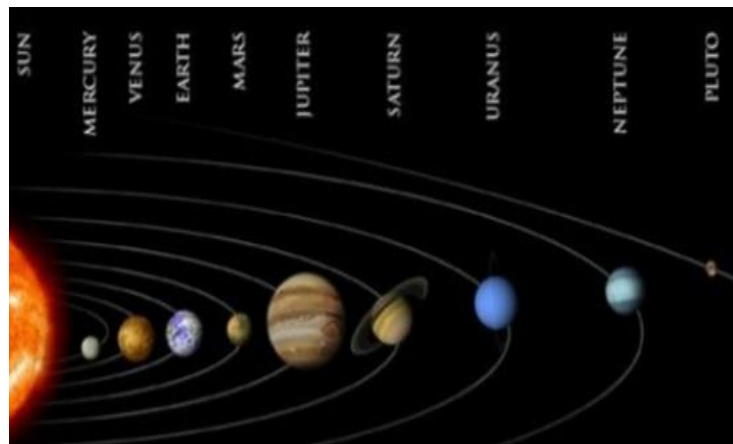

the observable universe, which is currently estimated to be 93 billion light-years in diameter. In various multiverse hypotheses, a universe is one of many causally disconnected constituent parts of a larger multiverse, which itself comprises all of space and time and its contents; as a consequence, 'the universe' and 'the multiverse' are synonymous in such theories.

SOLAR SYSTEM

The sun, the planets and all the objects moving around the planets are collectively called the solar system.

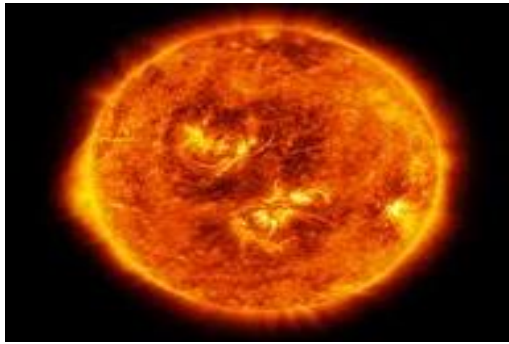

The solar system is in a galaxy which is known as "the milky way".

There are 8 planets in the solar system.

WHAT MAKES UP THE SOLAR SYSTEM?

- The Solar System was formed five thousand million years ago from the gas and dust of a nebula.
- The Solar System is made up of the Sun, eight planets with their satellites, dwarf planets and solar bodies.
- Small Solar System Bodies are other celestial bodies which orbit the Sun. They include Asteroids, comets and satellites.

SUN

Sun is a ball of hot and burning gases.

It is made up of gases called hydrogen and helium.

Sun is the nearest star to the Earth.

Sun is the major source of all energy for life on earth.

PLANETS

Planets are heavenly bodies revolving around the sun in elliptical orbits.

There are 8 planets in the solar system. All planets fall into two groups-

Inner Planets: Mercury, Venus, Mars and Earth

Outer Planets: Jupiter, Saturn, Uranus and Neptune

There is a ring of small bodies between the inner & the outer planets, which are made up of rocks & metals.

These are called Asteroids.

They keep moving around the sun and this ring is called the Asteroids belt.

The inner planets are also called the rocky planets as they are made up of rocks.

ORBITS

Each planet moves around the Sun on its own path called an orbit.

The orbit is kind of circular path with the Sun as their centre.

The orbits of different planets do not cross each other because planet remains in its own orbit.
